

Data Analyst

[Asset Resolution](#) is a startup providing data and analytical tools for climate analyses in the financial sector. Our data-driven solutions help financial institutions integrate climate risks and opportunities in their investment strategies. We are powered by research and driven by transparency.

We serve major global financial institutions as well as leading research institutions and have been recognized as a promising fintech start-up by Finance for Tomorrow Paris Europlace.

Responsibilities

We are looking for a data analyst to help us deliver valuable insights for our clients. We have a wealth of data available, and we want to make sure that our clients can navigate it effectively and efficiently.

Your main responsibilities will entail:

- Responding to data requests from our clients and helping us write guidance on how to use our data without worrying about common pitfalls or misunderstandings.
- Working closely with the rest of the data team to offer internal feedback on how our systems can be improved.
- Collaborating with our business team to better understand how we can predict and anticipate our clients' needs.
- Helping our data engineers ensure we provide quality data, by shaping our quality assurance and quality check processes, and helping determine what warning signs we need watch out for before sending data to clients.

Qualifications

Required

- Experience with PostgreSQL, including creating tables, and writing efficient queries.
- Experience with R or Python, preferably in data-focused projects.
- English language fluency.

Preferred (not necessary, but they help)

- Experience working in Agile/Scrum environments.
- Data Visualization experience (especially interactives/dashboards).
- Experience with cloud services (especially Azure ACIs, VMs, and DBs).
- Technical writing / Documentation experience.
- Interest in sustainability.
- Experience in the financial sector.
- French language a plus.
- 3+ years working as a Data Analyst, or in similar roles.

We offer you

- A dynamic team of data scientists, analysts, sustainable finance specialists, and developers passionate about the climate transition.
- A young company that spun off from the [2° Investing Initiative](#), a leading international, non-profit think tank working to align financial markets and regulations with the Paris Agreement goals.
- A small organization that is rapidly growing, providing a lot of opportunities to get hands-on experience, make your voice heard and help shape our future.
- A mission that brings together technology and impact.
- Flexibility in terms of working hours and location.

About us

Our vision is of a financial sector that empowers the global economy to take decisive action in line with the climate transition. Our mission is to optimize the accessibility and use of physical asset-level data for climate analysis by financial institutions.

We were established in 2018 in Paris and work globally. We are expanding rapidly to support the growing needs of financial institutions. Our ever-growing database includes 300,000+ physical assets across the largest carbon emitting sectors and covers 85,000+ companies linked to 20,000+ financial securities. For each asset and company in the database we offer a suite of climate-relevant indicators covering a 5-year time horizon including location, production capacity, production, emissions intensity, and emissions. We offer access to this unparalleled dataset through bespoke data products, and we are developing analytical solutions to turn this data into information through, for example, scenario analysis and physical risk analysis.
