

# Data Analysis Intern

## About this position

Asset Resolution's vision is of an empowered financial sector that sets the global economy on a net-zero emissions path. Our mission is to optimize the accessibility and use of physical asset-level data for climate analysis by financial institutions.

We are looking for an enthusiastic **intern** to join our team. If you're someone who is **passionate** about sustainable finance, embraces **start-up mentality** and a **steep learning curve**, and is excited to take on new challenges, we'd love to hear from you. We offer the opportunity to contribute to the world of ESG data, learn about sectors key to the climate transition, and experience the growth phase of a start-up.

## Responsibilities

Your primary responsibility will be to assist the Asset Resolution **Data Team**, with frequent interactions with the Product and Business teams. Over the course of the internship, you will have the opportunity to work with unique datasets covering climate critical sectors and advance your data analysis skills. Through your work, you will develop an understanding of sustainable finance data and metrics. In this cross-functional role, you will:

- Research company sustainability and financial reports for key insights and indicators.
- Analyse climate and financial data and prepare reports to answer clients' questions on Asset Resolution's data products.
- Research data providers and sources to help improve the coverage and quality of Asset Resolution's data.
- Support the development of new products, metrics and methodologies in close collaboration with the Asset Resolution Product Team.
- Conduct quality assurance (QA) and quality control (QC) checks of data and support the onboarding of raw data onto Asset Resolution's proprietary database.

## Required skills and experience

- Passion for sustainable finance and data.
- Interest in learning about climate critical sectors such as power generation, oil and gas extraction, automotive manufacturing, etc.
- Experience in summarizing technical and dense information into concise texts for a general audience.
- Cleaning and analysing data with code, ideally with SQL (knowledge of relational databases is a plus), R, or Python.
- Proficiency in Microsoft Excel.
- Fluency in English.
- Enthusiasm!

## We offer you

- A paid internship lasting 4-6 months with a potential transition to a full-time role.
- A dynamic team of data scientists, analysts, sustainable finance specialists, and developers passionate about the climate transition.
- Exposure to the latest tools and methodologies in tech and sustainability.
- A young company that spun off from the [2° Investing Initiative](#), a leading international, non-profit think tank working to align financial markets and regulations with the Paris Agreement goals.
- A rapidly growing organisation with a lot of opportunities to get hands-on experience, make your voice heard and help shape our future.

- A mission that brings together technology and impact.
- Flexibility in terms of working hours and location.

### Application process

We are looking for candidates with a **right to work in France or Germany** who can join us as soon as possible. Our offices are in Berlin (in-person) and Paris (remote). Please send your CV and a cover letter at [jobs@asset-resolution.com](mailto:jobs@asset-resolution.com). Phone interviews will be organized with shortlisted candidates.

### About us

We were established in 2018 in Paris and work globally. We are expanding rapidly to support the growing needs of financial institutions. Our ever-growing database includes 250,000+ physical assets across the largest carbon emitting sectors and covers 57,000+ companies linked to 10,000+ equity securities. For each asset and company in the database we offer a suite of forward-looking climate-relevant indicators including location, production capacity, production, emissions intensity, and emissions. We offer access to this unparalleled database through bespoke data products, and we are developing analytical solutions to turn this data into information that the financial sector can use to take decisive action against climate change.
